I. Amendments to the Claims

This listing of claims replaces, without prejudice, all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) An immunosensor system with reduced interference, comprising:

a first immunosensor that <u>includes a first immobilized antibody and</u> generates a <u>first</u> signal based on a sandwich between an the first immobilized antibody, a target analyte and a labeled antibody,

wherein a portion of the signal arises from non-specific binding of the labeled antibody in the region of the first immunosensor, and

a second immunosensor that <u>includes a second immobilized antibody</u> and acts as an immuno-reference sensor and generates a <u>second</u> signal that is the same as or predictably related to the degree of non-specific binding which occurs in the region of the first immunosensor, and has an immunocomplex between another the second immobilized antibody and an endogenous or exogenous protein that is in a sample and that is not the target analyte; and

an analyzer configured to determine a corrected signal from the first and second signals.

2. (Original) The immunosensor system of claim 1, wherein the first and second immunosensors are electrochemical sensors.

3. - 4. (Canceled)

- 5. (Previously Presented) The immunosensor system of claim 1, wherein the system is in a disposable cartridge for measuring analytes in the sample.
- 6. (Previously Presented) The immunosensor system of claim 1, wherein the target analyte is selected from the group consisting of troponin I, troponin T, creatine kinase MB, procalcitonin, hCG, NTproBNP, proBNP, BNP and myoglobin, in the sample.
- 7. (Currently Amendedl) The immunosensor system of claim 5, wherein the <u>second</u> immobilized antibody in the <u>second immunosensor</u> is to a plasma protein.
- 8. (Canceled)
- 9. (Currently Amended) The immunosensor system of claim 5, wherein the endogenous or exogenous protein in the sample is present at a concentration sufficient to bind more than 50% of the available <u>second</u> immobilized antibody on the <u>second</u> immunosensor within about 100 seconds of the sample contacting the immunosensor system.
- 10. (Currently Amended) The immunosensor system of claim 5, wherein the <u>second</u> immobilized antibody in the <u>second immunosensor</u> has an affinity constant of about 1 x

10(7) to 1 x 10(15).

- 11. (Currently Amended) The immunosensor system of claim 1, wherein both of the first and second immobilized antibodies are immobilized on microparticles of diameter in the range 0.01-5.0 um.
- 12. (Currently Amended) The immunosensor system of claim 1, wherein the endogenous or exogenous protein is present in the sample at a concentration of at least three orders of magnitude above the affinity constant of the <u>second immunosensor</u>.
- 13. 68. (Canceled)
- 69. (Previously Presented) The immunosensor system of claim 6, wherein the sample comprises a blood sample.
- 70. (Previously Presented) The immunosensor system of claim 12, wherein the sample comprises a blood sample.
